Card Account Updater Service for SuitePayments.

Automated stored payment card updates

Reduce the frequency of declined card transactions and collect payments on-time with Account Updater Service for NetSuite. When a customer's Visa, Mastercard or Discover card is lost, stolen, expired or changes for any reason, the card details on file will be automatically updated.

Account Updater Service will:

- Minimize lost revenue due to unnecessary failed payments
- Reduce customer cancellation with payment continuity
- Save time and reduce costs associated with contacting customers and updating accounts manually
- Provide customer convenience, no requests needed for card account updates

Protect your revenue from costly declines and avoid service interruptions to your customers with Account Updater.

For businesses offering or supporting:

- Subscriptions
- Memberships
- Recurring billing
- Card-on-file

How it works:

- Customer Card information is stored in the MerchantE Secure Card Vault, and replaced with a Token linked to the NetSuite Customer Record
- Payments are processed within NetSuite using the MerchantE Token on file
- MerchantE contacts card brands weekly to request updates to cards on file
